

Amendments to the Specification:

Please replace the paragraph beginning at page 12 number, line 6 number with the following amended paragraph:

However, in the implementation of Fig. 6, the source detector 612 may be provided in each of the fuel dispensers 600. When the source detector 612 detects an ignition source within the vicinity of the fuel dispensing station, the control unit 610 directly controls the pump-drive-motor 710 to suspend fueling, causes the panel communicator 712 to show the detection, and transmits the detection signal to the fuel-management unit 700. The control unit 610 may also receive signals from nozzle switch 718 and pulse generator 720. The fuel-management unit 700 controls the indoor and outdoor communicators 702 and 704, respectively.
